Spunlace (Water-jet) Technology

Spunlace nonwoven fabrics produced by water jet technique are fabrics with high surface quality. The production technology relies on the use of pressurized water to bind the core fibers together, enabling the production of high-strength, low-thickness nonwoven fabrics without the use of additional chemicals. An important feature of these products is their wide range of uses. It is possible to see spunlace fabrics in many different sectors such as health, cosmetics, construction, automotive, furniture and clothing. With its experience, Salvin makes it possible to produce fabrics with many different options such as water absorbent, water repellent, UV resistant, fireproof, anti-bacterial, colored and extra hard surface in line with customers' requests. Production is made in the desired width and length according to demands of the customers.

Hot-Melt Lamination Technology

Salvin develops itself day by day in the field of technical textiles and continues its investments. We can laminate 3 different fabrics at the same time in our Hot-melt Lamination facility, which is unique in Turkey. It has the feature of making high quality lamination of materials such as woven or knitted fabric, nonwoven, film or membrane by using desired amounts of adhesive with »Slot Die« technique. In line with the demands of our customers, we can produce fabrics with technical properties such as waterproofing, breathability, high washing resistance, flame retardancy or high UV resistance.

Hydro-entangled Cotton

Hydro-entangled Nonwoven Cotton Fabrics produced by the water jet technique are a special product in terms of the areas where they are used. It is quite difficult to provide softness and high strength at the same time in nonwoven cotton fabrics, but Salvin has managed to satisfy its customers with its special technology and experience. Thanks to its 100% cotton structure, it does not harm the environment and dissolves quickly in nature. Nonwoven Cotton fabric is mostly preferred in the fields of hygiene, medical and cosmetic. Production is made in the desired width and length in line with the demands of the customers.

Baby Cleaning Pads

Baby skin is thinner and less oily than adult skin. Since the skin's protective layer has not yet developed, it is vulnerable to external factors. To protect your baby's skin against external factors, allergies and irritation, using cotton soaked with water in skin cleaning is one of the solutions recommended by physicians.
